DMIT2503 – Advanced Web Concepts

Nivo Slider Activity

Nivo Slider is one of many Content Sliders used on modern websites. Nivo has been very popular, but now has become a paid Wordpress Plugin only. We are using the original HTML version here.

Using the provided files downloaded from the Nivo site as well as any simple HTML layout, please integrate Nivo slider to show 4 photos with captions. Feel free to make up text content to go with each slide.

Remember: We are using Nivo's standalone slider, NOT the Wordpress plugin.

A couple tutorial links have been provided. It is up to you to figure out how to make it work and how to incorporate one of the included themes.

Hints:
- Please make sure all your images are the same size.
- Nivo works best if you put it into some kind of containing element in your design.
- If your Next/Previous links look un-styled, then you probably have not incorporated a theme correctly.
- Please feel free to change the folder structure (add a /js/ folder, etc.)

You are encouraged to substitute your own design and/or your own photos for this work.
